

In a flood, information arrives fast. Help still arrives fragmented.

Residents, volunteers, shelters, weather, and field reports rarely meet in one trusted operating picture.

RESIDENT

Wheelchair user upstairs

ROAD

South access is blocked

SHELTER

18 spaces available

VOLUNTEER

Transport within 8 km

The dangerous gap is between receiving a signal and coordinating verified action.

Response breaks where disconnected channels collide.

RAW REPORTS

Duplicate, conflicting, incomplete

COMMUNITY AID

Offers without verification

LIVE CONDITIONS

Weather and access change quickly

MANUAL BOTTLENECK

One coordinator
Multiple
spreadsheets
No shared status

PRIORITY

Life-safety needs stay buried

CAPACITY

Useful resources sit idle

TRUST

Automation can amplify bad data

AEGIS creates one verified operating loop.

AEGIS does not dispatch independently. It organizes evidence, proposes matches and routes, and records the authorized human decision.

Three focused experiences create one shared operational truth.

RESIDENT

Get help

State the need, location, and vulnerability. See immediate safety guidance and verified nearby capacity.

COMMUNITY

Offer support

Register volunteer skills, travel radius, shelter space, accessibility, pets, and backup power.

COORDINATOR

Coordinate response

Verify evidence and offers, choose staging sites, match resources, route aid, and authorize action.

One record follows the incident from request to verification, assignment, alert, and audit.

Specialized agents turn live signals into one reviewable response plan.

Confidence and severity remain separate throughout the decision.

WHAT THE SYSTEM DOES

- 1 Corroborates**
Groups matching reports without turning repetition into certainty.
- 2 Preserves uncertainty**
Unique or unsupported claims stay visibly unverified.
- 3 Escalates vulnerability**
Mobility, medical, child, older-adult, and transport needs affect priority.

People can ask for the right help without learning emergency jargon.

The screenshot shows the AEGIS mobile app interface. At the top, it says 'GET HELP' and 'Tell us what you need and where you are.' Below this, a note states: 'Your request goes to an authorized coordinator. Location and vulnerability details are used only for response matching.' The form is divided into several sections: 1. 'Name' with a text input field labeled 'Name or initials'. 2. 'Your current location' with a text input field labeled 'Search address or nearby landmark' and a 'Search' button. 3. 'What help do you need?' with a grid of six checkboxes: 'Urgent rescue', 'Medical aid', 'Transportation', 'Food and water', 'Accommodation', and 'Power support'. 4. 'Who may need priority support?' with a grid of four checkboxes: 'Older adult', 'Child present', 'Disability or mobility need', and 'Medical equipment'. 5. 'LOCAL SIGNALS' section with 'Current conditions' and a note: 'Select a location to load current weather. Off-dial alert feeds remain distinct from community reports.' 6. 'NEARBY SUPPORT' section with 'Verified availability' and a table showing 'Volunteers' and 'Shelter options' both with a count of 0. A note at the bottom of this section says: 'Only coordinator-verified, currently available offers are shown.'

GET HELP

Tell us what you need and where you are.

Your request goes to an authorized coordinator. Location and vulnerability details are used only for response matching.

Name

Your current location

What help do you need?

☐ Urgent rescue	☐ Medical aid
☐ Transportation	☐ Food and water
☐ Accommodation	☐ Power support

Who may need priority support?

☐ Older adult	☐ Child present	☐ Disability or mobility need
☐ Medical equipment	☐ No transportation	

LOCAL SIGNALS

Current conditions

Select a location to load current weather. Off-dial alert feeds remain distinct from community reports.

NEARBY SUPPORT

Verified availability

Volunteers	0
Shelter options	0

Only coordinator-verified, currently available offers are shown.

Immediate life danger?
Contact your local emergency services now. This form does not replace emergency dispatch.

1

Enter name or initials

2

Search an address or landmark

3

Choose needs and vulnerability

4

Submit for coordinator verification

Immediate danger guidance stays visible.

Volunteer and shelter offers become useful only after verification.

The screenshot shows a web interface for 'OFFER SUPPORT'. At the top, it says 'Share capacity responders can verify and coordinate.' followed by a note: 'Offers are not shown to residents or assigned until an authorized coordinator verifies them.' Below this are two tabs: 'Volunteer' (selected) and 'Shelter provider'. The form fields include: 'Volunteer name' (text input), 'Current location' (text input with a 'Search' button), 'What verified support can you provide?' (four checkboxes: Transportation, Food and water, Accommodation, Power support), 'Maximum travel radius' (a slider set to 10 km), and a 'Submit availability' button at the bottom.

REGISTER

Volunteer

Location, skills, travel radius, availability

Shelter provider

Spaces, step-free access, pets, backup power

Coordinator verifies identity, capability, and current capacity before matching.

Coordinators see priority, staging, routes, and accountability together.

NEW OPERATION

Turn incoming reports into coordinated action.

Identify the operator, locate the incident and response origin, then add reports exactly as they were received. AEGIS builds the operating picture from those inputs.

Operator name

Incident location

Suggested response staging

Select the incident location to find nearby public-safety sites automatically.

Incoming situation reports

Paste one report per line.
Include observed conditions, people at risk, accessibility needs, and access constraints.

0 reports ready. Used for hazard, priority, confidence, capability, guidance, and audit analysis.

1 Import or enter reports**2** Review all suggested staging sites**3** Select multiple staging points**4** Verify offers and match resources**5** Approve route, alert, and audit**One decision record, from intake to authorization.**

The complete value story fits in two minutes.

Demo point of view: a municipal or NGO duty officer coordinating one evolving flood incident.

AI accelerates judgment without replacing it.

ACTIVE RESPONSE

Resident and community reports

Current evidence

Nominatim, Open-Meteo, Overpass, OSRM

Preparedness data does not decide active triage.

AEGIS strengthens resilience before, during, and after a flood.

BEFORE

Preparedness

Understand climate exposure, accessibility gaps, and community capacity.

DURING

Coordination

Prioritize vulnerability, verify resources, route aid, and communicate clearly.

AFTER

Accountability

Review evidence, decisions, response gaps, and readiness improvements.

One request. The right verified help. A coordinated response people can trust.
